200m	0-20	9	5	20.0

*Screen analysis washed over screens and redried.

Manure Spreader Superfine is the same product as our Superfine Aglime except that it has not been run through a screening plant after it is recovered from settling ponds and has not been solar dried. As such, it will contain more and larger clods of the superfine material and an occasional rock.

Chemically this product is about 90% Calcium Carbonate (CaCO₃) and about 8% Magnesium Carbonate (MgCO₃). The clods will break down after the material is spread and receives substantial rain.
